Read and translate the text.

Today's firefighters must be prepared to not only fight fires but also respond to crises ranging from traffic accidents and medical emergencies to natural disasters, water rescues, and sadly, even terrorist attacks. Before entering a career in the fire service, it's important that you understand what firefighters do and where they work, as well as the risks associated with the job.

As a firefighter, you'll be responsible for a number of duties. Most obvious among those duties is fighting fires, but you'll also respond to a variety of other emergencies, from minor nuisances such as a fallen tree blocking a roadway to major incidents such as gas leaks, traffic accidents, vehicle rollovers, plane crashes, building collapses, and floods.

When disasters occur, firefighters often are the first responders. As a result, many departments require firefighters to be trained as emergency medical technicians (EMTs) so they can provide first aid and perform other life-saving medical procedures on victims.

Other responsibilities include rescues, not only from burning buildings but also from hard-to-reach places, such as lakes or rivers. You may have to help clean up hazardous materials. For example, when a truck hauling oil overturns on a highway, fire departments are often called to block roadways, prevent fire, clean up the oil, assist injured victims, and more. During floods, you may have to notify people to evacuate their homes.

Firefighters often work with other emergency services, including police departments, other fire departments and ambulance personnel. When working with other emergency services, you'll follow the direction of your superiors, who are responsible for coordinating with other units.
